

Acklam Grange High School
Middlesbrough

Description

Acklam Grange was the first school to be constructed during the Middlesbrough BSF programme. It houses 1,400 students and is a truly state of the art facility. The forward thinking attitude towards the project, at design stage, led to innovative environmental energy solutions being showcased, such as the installation of a small wind turbine to part power the science block.

Nationwide Interiors were delighted to be awarded the contract to supply and install door sets with ironmongery, window boards, skirting boards, architraves, glazed timber screens, timber framework and hardwood capping.

During the contract, we were awarded a second additional package to install a large quantity of cement particle boards to the underside of newly installed canopies.
