

**Project: Co-Operative Academy, Stoke-On-Trent**

**Client: Balfour Beatty / Role: Joinery Fit-Out**

**Balfour Beatty** Value: £540,000

Stoke-on-Trent's participation in the 'Building Schools for the Future' programme equated to a £261 million pound spend across 18 Secondary and Special schools across the region.

Previously known as 'Brownhills Academy', this new stunning Semi-Circular school at Tunstall was/is, we're delighted to report, the real stand out project of all the ones undertaken beneath the B.S.F. banner in the area, and easily the one that constantly brings the most acclaim and comment.

It encompasses all the latest state-of-the-art building techniques and practices and also some 'never before seen' design elements, it also enjoys a large atrium which provides a light and airy environment for the student's arrival. Internally, the Academy boasts a number of 'Hi-tech' teaching walls and electronic whiteboards as standard as well as a selection of top quality 'Leaderflush' Doorsets, other specialist 'fit-out' elements installed included all the feature Timber Screens and their associated Glazing, utilising both acoustic and standard glass.
