

Project: *Northumbria Specialist Emergency Care Hospital*

Client: Lend Lease / Role: Joinery Fit-Out

lendlease Value: £540,000

Work has now been completed on the new 'Northumbria Specialist Emergency Care Hospital' which opened its Doors on the 16th of June 2015. This £95million North East hospital aims to revolutionise health care in the UK.

The facility has cost £75million to build - plus £5million to improve surrounding roads and £15million for specialised equipment. It will have 210 acute beds spread across seven specialist wards.

The new hospital is the result of 10 years' work led by clinical teams at Northumbria Healthcare, and will be dedicated to emergency care, having A&E consultants physically on site 24/7, as well as specialists in a range of conditions.

It houses 'State-of-the-art' scanning equipment, currently the best available in the NHS. has just been installed, including an MRI scanner, two CT scanners, four digital x-ray systems and three digital mobile x-ray machines which are some of the most advanced in the world. They produce the highest quality of images, ensuring clinicians at the hospital will be able to quickly diagnose the condition of a patient who has been seriously ill or injured.

Our works comprised of our standard 'Supply and Install' Joinery Package although the Doorsets were of free issue on this occasion and were obtained directly from a Lend Lease supplier, we did however supply and install a good number of temporary Doors as the finished products were removed and stored during the main body of Construction to prevent damage, we also supplied and installed Skirtings, Architraves and Windowboards.

In addition, we installed a large amount of various 'Group 2' F. F. & E. elements such as Mirrors, Soap Dispensers, W.C. Roll Holders, Coat Hooks etc. and also a number of Brochure/Information leaflet Pigeon Holes.
